

SAMADHAN KOKARE

Frontend Developer · React.js & Next.js Specialist

Mumbai, India | 7887714554 | samadhankokare1999@gmail.com | [Linkedin](#)

PROFESSIONAL SUMMARY

Frontend Developer with 3.9+ years of experience delivering scalable, production-grade web applications at Tata Consultancy Services and a product startup. Specialist in React.js, Next.js (SSR/SSG), Redux Toolkit, and React Query. Shipped an end-to-end ATS platform, enterprise dashboards, and UI automation that drove a 30% operational efficiency gain. Adept at performance optimisation, component architecture, and working in Agile delivery teams.

TECHNICAL SKILLS

Frontend Technologies: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

State Management: Redux Toolkit, React Query (TanStack Query)

Backend: Node.js, Express.js, REST API Design

Databases: MongoDB, SQL (MySQL / PostgreSQL)

UI & Styling: Tailwind CSS, CSS3, Responsive Design

Performance: Code Splitting, Lazy Loading, Dynamic Imports, React.memo, useMemo, useCallback

Tools : Git, Jira, VS Code, Agile / Scrum

WORK EXPERIENCE

Software Engineer — Cloudevel Innovation Pvt Ltd, Chennai

March 2025 – Present

- Architected Next.js (SSR/SSG) frontend modules for a full-scale ATS platform, improving initial page load performance and SEO visibility across 500+ active job requisitions.
- Built recruiter dashboards, multi-stage candidate pipelines, and role-based interview workflows, reducing manual tracking effort and consolidating the entire hiring lifecycle into one UI.
- Integrated React Query for API caching, background refetching, and optimistic updates, cutting redundant network requests by ~40% and standardising error state handling across the platform.
- Designed dynamic forms with 30+ conditional fields, multi-step validation, and real-time state sync — handling complex recruiter inputs without performance degradation.
- Applied React.memo, useMemo, and useCallback to eliminate unnecessary re-renders in data-heavy dashboard components; used lazy loading and dynamic imports to reduce JS bundle size.

System Engineer — Tata Consultancy Services (TCS), Mumbai

March 2022 – January 2025

- Automated UI-driven workflows for enterprise clients, contributing to a 30% increase in operational efficiency validated across sprint reviews and stakeholder sign-offs.
 - Developed and maintained large-scale React.js applications with Redux Toolkit, handling async workflows and structured global state across multi-module projects over 6+ release cycles.
 - Built reusable component libraries that reduced code duplication by ~35%, cutting new-feature development time and accelerating team onboarding.
 - Optimized React rendering performance by refactoring inefficient component trees, introducing memoisation patterns, and improving load times across critical user journeys.
-

KEY PROJECT

Next.js · React Query · Redux Toolkit · Tailwind CSS

- Built end-to-end HR dashboards with SSR for real-time data; delivered candidate pipeline management, multi-round interview tracking, and role-based UI for recruiters and hiring managers.
 - Implemented bulk CSV resume import with file validation and error feedback; optimised Redux state slices and applied memoisation to maintain performance on list views with 1,000+ records.
-

EDUCATION

Bachelor of Technology (B.Tech) — KIT's Autonomous College of Engineering, Kolhapur

June 2021
